WORK SAVING

Steel Kitchens

MODERN STEEL EQUIPMENT CO.

GENEVA, ILLINOIS

Just imagine having one of these modern kitchens in your own home. How efficient it is—there's a sanitary place for everything in the Modern Steel Cabinets. Kitchens like these stay "spic and span" with practically no effort. When you get yours, you'll proudly invite your friends into the kitchen—you'll entertain them there; and they'll love it.

Forever After YOU'LL BE GLAD YOU INSTALLED A MODERN STEEL KITCHEN

In your home, as in nearly all others, life revolves around the kitchen. It is the workshop and office for most home activities. It has been called the most important room in the home—the very heart of a home.

It is altogether fitting that much scientific study in recent years has been devoted to the business of kitchen planning. No small part of this planning has centered on steel kitchen cabinets. They are now developed and perfected and reasonably priced so that you can have an ideal, scientifically planned kitchen right in your own home.

Modern Steel kitchen cabinets offer all that's good in kitchen cabinet efficiency. They match the beauty and easy-to-clean styling of your major kitchen appliances such as stove, refrigerator and sink.

From the full selection of sizes and styles of Modern Steel cabinets catalogued here, an efficient grouping can be made for your kitchen—regardless of its size or shape.

Modern Steel cabinets provide lifetime, trouble-free permanence. They are built of heavy gauge steel electrically welded together for rigid strength. The drawers and doors work perfectly

—all the time. There can be no swelling, sticking or warping of steel in damp weather—neither can it shrink when it is dry. Modern Steel cabinets are quiet and noiseless because door and drawer fronts are insulated and close against rubber bumpers. Here are cabinets that provide sanitary, orderly storage for foodstuffs, utensils and dishes.

The easy-to-clean finish that is provided by the tough baked enamel appeals strongly to most housewives. The enamel is baked onto the steel under high temperatures. It will not crack or chip and splattering cooking fats or fumes do not affect or stain the finish in any way. The finish cleans quickly and easily with a damp cloth and soap.

When these cabinets are installed in your home, your kitchen becomes a much easier room to work in. Time and labor will be saved in the kitchen, thus providing leisure for other activities. The kitchen becomes a beautiful room to enjoy—a room that you will exhibit to your guests with rightful pride.

WALL CABINETS

Shown at the right are typical wall cabinet units. It will be noted that the clean, simple lines of the wall cabinets provide smooth, sanitary surfaces that require little or no attention to keep them in their original "spic and span" appearance. Complete range of the wall cabinet sizes available is shown on page twelve.

Double-door wall cabinet equipped with shelves for general storage purposes. Both doors open independently.

BASE CABINETS

The handsome all-steel base cabinets shown here are finished with a fine quality synthetic enamel that has been baked onto the steel. This finish is one that is easy to clean and will not discolor. Drawers and doors in base cabinets are accurately fitted so as to close and catch with precision. Complete details as to available sizes of base cabinets are given on page twelve.

Combination cupboard and drawer base cabinet. This unit offers diversified storage and is especially useful in preparation area.

Single-door, cupboard type base cabinet supplied with door hinged on either right or left side. Illustration shows door hinged on right side.

Double-door, cupboard type base cabinet with full width top drawer and roomy storage compartment with shelf below.

All drawer base cabinet facilitates storage of hard-to-stack pots and pans. Also intended for use with bread box and other accessories.

MODERN STEEL EQUIPMENT CO.
GENEVA, ILLINOIS

MODERN STEEL CABINETS

Modern Steel cabinets are designed to be grouped into assemblies quickly and easily. Years of experience and study in kitchen planning have developed in this group of Modern Steel cabinets a unit for every purpose. Many different sizes and combinations are available to meet every kitchen planning need. All dimensional data and a full showing of all available sizes are given on page twelve.

Narrow, single-door wall cabinet furnished with door hinged on either right or left side. Illustration shows door hinged on right side.

Wall cabinet 18" high, 13" deep. Convenient for use over refrigerator, sink or range.

Sink base cabinet is used as sink bowl enclosure in assembling cabinets under continuous sink top. Furnished with full sides, bottom, sub-base and ventilated top panel.

Plate warmer cabinet has satin finish chromium steel lining, is insulated with rock-wool and electrically heated. The cabinet is equipped with two woven wire sliding shelves.

Implement cabinet especially equipped with hooks and clips for the convenient storage of broom, vacuum cleaner, etc.

Utility cabinet provides roomy storage for linen, dishes or even pots and pans.

MODERN STEEL EQUIPMENT CO.
GENEVA, ILLINOIS

CORNER CABINETS

A corner wall cabinet solves the problem of continuing wall cabinets around a right angle corner in "L" or "U" shaped installations.

Corner base cabinet designed to utilize corner space in "L" or "U" shaped installations. Supplied for either right or left hand corner. Illustration shows right hand construction.

COUNTER TOPS FOR BASE CABINETS

All work tops for base cabinets are made in standard $1\frac{1}{2}$ " thickness. The depth and length vary according to your specific requirements. Tops are fabricated in your choice of the following materials:

LINOLEUM

Made with solid 7-ply wood core on which medium gauge linoleum is laminated under pressure; edges bound with stainless steel on all sides.

The linoleum used will withstand heat up to 212° F—boiling water will not harm it. An occasional dressing with wax or boiled linseed oil cleans and restores the original luster. Due to the composition, linoleum tops

are the quietest type and safest for fine china and glassware.

MAPLE (LAMINATED)

Made of solid sections of laminated maple, fastened together with metal rods, the heads of which are recessed and concealed with maple plugs.

In addition to the above specific types, a variety of materials are available upon special request including stainless steel, Monel metal, porcelain enamel on steel, Formica on wood core, or composition covered counter and work tops.

MODERN STEEL EQUIPMENT CO.
GENEVA, ILLINOIS

FILLER STRIPS and FINISHING SECTIONS

TRIM MOULDING—Makes neat closure joint between top of wall cabinets and furring or ceiling.

MS—MOULDING STRIP—Aluminum wedge seals crevice between linoleum sink top and adjacent base cabinet. Supplied with cement.

BOTTOM PLATE—Recommended on under side of 18" high wall cabinets used over refrigerator or range. Also finishes bottoms of 30" high cabinets smoothly.

HMS—MOULDING STRIP—Aluminum wedge used to join Modern Steel base cabinets onto porcelain sink top. Supplied with cement.

BASE SCRIBING FILLER—Designed to take up any left over space 3" or under. Can be cut on job to fit uneven walls.

CORNER FILLER—For joining cabinets at right angle corner. Made 18" or 30" for wall cabinets and 30 1/2" with base for base cabinets.

WALL SCRIBING FILLER—Designed to take up left over space 3" or under, at end of wall cabinet. Can be cut on job for uneven walls.

MODERN STEEL EQUIPMENT CO.
GENEVA, ILLINOIS

GLASS DOORS may be supplied as an accessory to replace regular doors on any wall cabinet.

Ornamental CORNER SHELF—a color item to beautify the kitchen and take up small left-over corners.

UTILITY SHELF made of stainless steel with enamel back. Used under No. 2418 wall cabinet, between 30" high units.

Page

These handy accessories keep everything at your finger tips. They make it possible to locate within easy reach materials or utensils very often difficult to arrange in plain drawers or on shelves. They provide sanitary storage in containers that are in harmony with the planned kitchen instead of a hodge-podge of miscellaneous canisters, tins, etc. All are quickly and easily removable for cleaning.

Fine Modern

CUTLERY TRAY with adjustable partitions and linoleum covered bottom, shown with cutlery spacer which clips to side of drawers wider than 18" or 21".

CUTTING BOARD made of hardwood moves on stainless steel slides clipped to sides of drawer.

(UNDER SIDE OF WALL CABINET)

LIGHT MOUNTED ON BACK WALL ABOVE BASE CABINETS

SOFFIT LIGHT with chrome back plate. Complete with Lumiline bulb, switch and electric service outlet.

TRAY STORAGE INSERT can be easily installed in a 24-C base cabinet, providing a convenient storage for serving trays, large platters, etc.

TOWEL RACK with cadmium plated rods. Pulls out easily for accessibility.

FLOUR, SUGAR and MEAL BINS for bulk storage. Each heavily finned container has separate lid.

Wire **CONDIMENT SHELF**, or step shelf, for orderly storage of small package items, so as to be independently accessible.

CUP HOOK RACKS are easily attached to the underside of any shelf in wall cabinets. No drilling necessary. Racks are equipped with cadmium plated hooks.

SLIDING FLOUR BIN with sifter operates on extension slides. Easily removed for cleaning. Also available with sugar cut-off.

Conveniences

All Modern accessories are **PACKAGE TYPE** which means it is possible to install them at any time. It is not necessary to have them built in at the factory. This enables you to move them easily from one location to another should some new arrangement be found more convenient. Also, additional items may be required after kitchen has been in use for some time. Anyone can slip these accessories in place and in only a few instances is even a screw driver required.

GRILLED DOORS are used in place of regular doors on sink fronts to provide additional ventilation or cover radiators.

AUXILIARY STORAGE RACK for cleaning materials attaches to door in sink cabinet. Made of heavy wire.

Wire **PAN COVER FILE** fits any deep drawer and keeps each cover orderly and independently accessible.

VEGETABLE BIN made of expanded metal, finished same as cabinet, may be installed in any "C" or "SC" type base cabinet.

GARBAGE RECEPTACLE with removable, 8-quart galvanized pail. Cover lifts automatically when door is opened.

Heavily finned **BREAD BOX** with sliding cover made to fit neatly into any deep drawer. Equipped with wire cake shelf.

TYPES OF KITCHENS

STRAIGHT WALL KITCHEN

1.—The STRAIGHT WALL kitchen utilizes only one wall of the room. The installation may consist of a straight line of cabinets only or the line-up may also include a grouping of cabinets along with range and refrigerator.

Page 10 •

"L" SHAPE KITCHEN

2.—The "L" SHAPE kitchen is a model of compactness and efficiency with storage, preparation and cleaning, and cooking areas grouped in perfect sequence—beginning with storage at the service door and ending with cooking area nearest the dining room. Opposite two walls are open for the many other kitchen activities.

"U" SHAPE KITCHEN

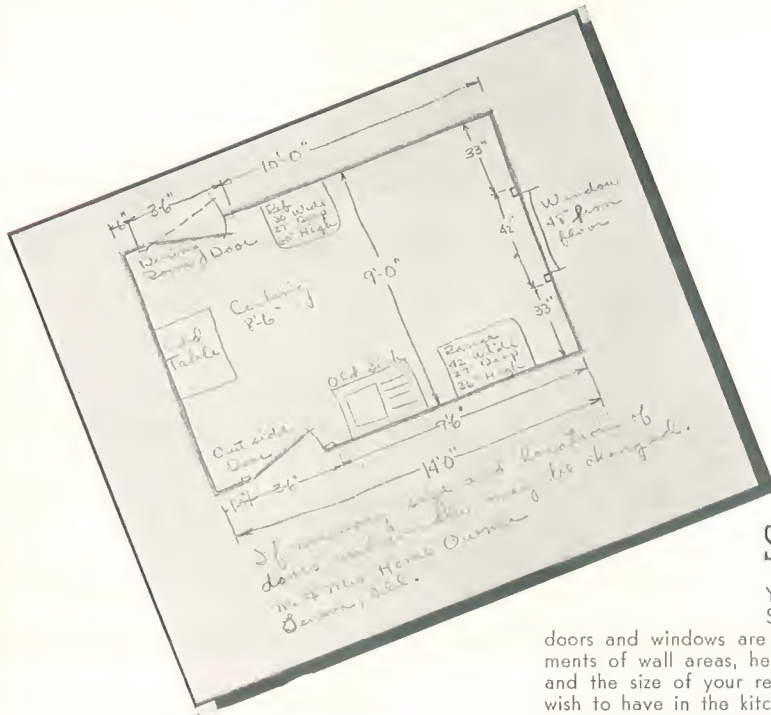

3.—The "U" SHAPE kitchen presents the most ideal possibility for arranging work areas in their most efficient grouping. By placing sink on the center wall, not a step is wasted in working from one area to the next.

CORRIDOR TYPE KITCHEN

4.—The CORRIDOR TYPE kitchen is especially desirable where breakfast nook and dining room are at opposite ends of the room. It can be made equally as efficient as other types of kitchens by placing storage, cooking and serving areas on one wall and preparation and cleaning areas on the other.

HERE'S HOW TO PLAN YOUR MODERN KITCHEN

SEND US ROUGH SKETCH

You need not be an expert to measure a kitchen. Simply make a rough sketch showing where doors and windows are located. Be sure to include careful measurements of wall areas, height of window sills from floor, ceiling height, and the size of your refrigerator and range or any other article you wish to have in the kitchen. Send your rough drawing to our Kitchen Planning Department or take it to our representative in your city. Our kitchen planners will give you the benefit of their expert experience.

WE'LL SEND YOU DETAILED PLAN AND COLOR DRAWING

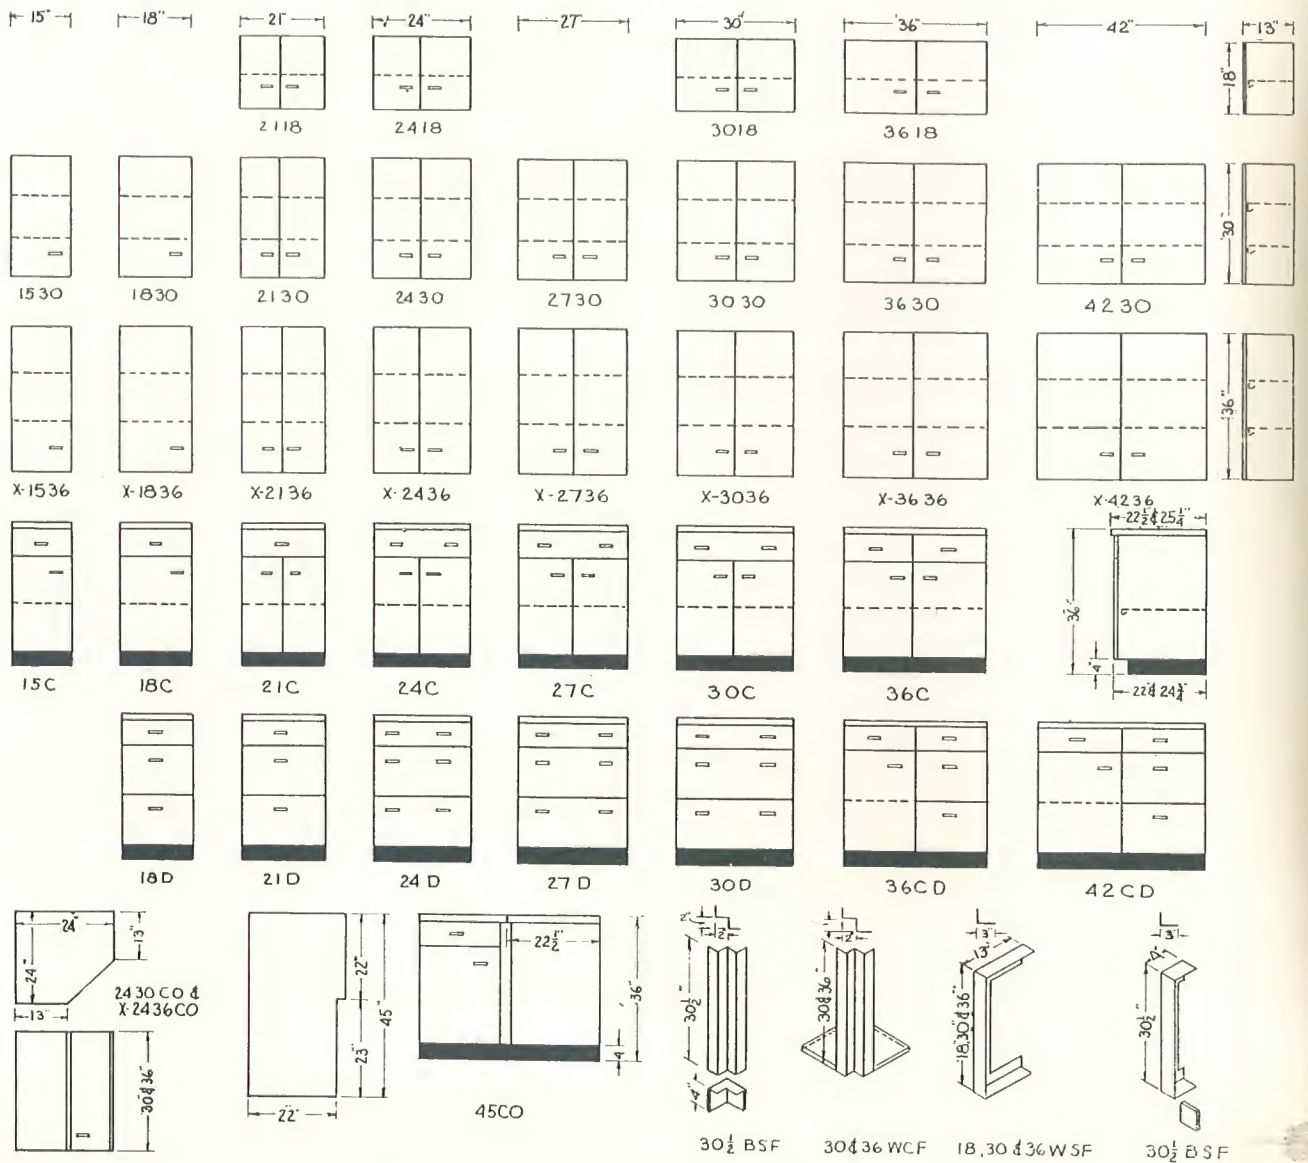

We will send you a plan covering every detail necessary to modernize your kitchen. Your contractor will find this very valuable in making any alterations you may be contemplating. In addition, we will send you a perspective or elevation drawing so that you can easily visualize exactly how your modernized kitchen will look. This can also be used to decide color combinations.

MODERN *Steel Kitchen Assemblies*

Shown below is drawing or work sheet which gives complete dimension information on the entire line of Modern Steel Kitchen Cabinets. All available models and all of the various sizes in which they are supplied are shown here. The drawer, door and shelf arrangements of all models are also indicated on the drawings below. The wide range of sizes and styles available make it easy to use Modern Steel cabinets for almost every type or size of kitchen.

by Units

In planning an installation of Modern Steel Cabinets, the information given below will prove very helpful. The model number of each wall or base cabinet also indicates its size. First two digits of a wall cabinet number indicate width of the cabinet. The last two digits show its height. On base cabinets, the two digits indicate width of the cabinet and the initials are a guide for drawer, door and shelf arrangement.

Drawings shown here are in quarter inch scale (1/4"=1 ft.) for ease in preparing actual plans from this page.

QUALITY CONSTRUCTION FEATURES THAT DISTINGUISH MODERN STEEL CABINETS

Cut-away section of door front showing how sound insulating material is placed within walls of all doors and drawer fronts.

Door and drawer pulls are of handsome, modern design, assuring a comfortable, easy grip on the handle. Handles are heavily plated with chromium.

All drawers operate easily in a non-friction type of drawer carrying suspension. Drawers stay in perfect alignment empty or full and stop automatically.

Close-up section of cabinet front showing semi-concealed door hinges. This quality hinge possesses unusual strength.

Interior view of cabinet showing neat, tightly fitted shelf construction. Shelves are spot welded into position, thus assuring rigidity and freedom from rattles.

All base cabinets are constructed with a set-back, or recess, on the floor line to provide ample toe space.

MATERIALS—All kitchen cabinet units shown in this catalog are fabricated from high grade, cold rolled steel of heavy gauge to insure rigidity and long term durability. All steel is carefully inspected before fabrication. Tops of cabinets are made of the finest material available.

CONSTRUCTION—Steel parts for cabinets are carefully formed and electrically spot-welded into position. This type of sturdy construction assures absolute strength and freedom from metallic rattles. Perfectly squared shelves fit neatly against cabinet body for easy cleaning and to prevent dust-catching corners. Shelves are of one-piece steel construction with front edge squared and folded over.

All door and drawer heads are $\frac{5}{8}$ " thick of double steel wall construction, with smooth, easy-to-clean flat surface on both sides. Interiors of doors and drawer heads are filled with sound-absorbing material to eliminate noise and rattling. All doors and drawers close against rubber bumpers. Construction of drawer slide permits easy removal of drawer for cleaning or interchanging to another cabinet.

FINISH—After steel cabinets have been fabricated into their finished size and shape, all joints and welds are polished to assure a smooth even finish. The raw steel cabinet work is then carefully cleaned with chemicals to remove all traces of grease which may have been left on the sheets in the fabricating process. Frames are then carefully dried before enamel is applied. Following this, the cabinets receive two coats of the highest quality synthetic enamel. This enamel is applied by a baking process under high temperatures and is consequently a very fine, durable and pure white finish.

HARDWARE—Exterior hardware, such as door and drawer pulls, is of heavy stamped metal on which a heavy and durable coat of chromium has been carefully applied. The design of these handles assures easy cleaning.

The all-steel hinges are of semi-concealed design. These close-fitting hinges assure perfect door alignment and unusual strength.

Catches which hold doors closed are of a design which experience has shown to be most successful.

WORKMANSHIP—Modern Steel kitchen cabinets are built by men of long experience in the construction of high quality metal cabinets. Each operation in the manufacture of these cabinets is carefully supervised. All cabinets have been carefully designed and planned by kitchen planning experts with the one idea in mind of producing only the finest quality all-steel kitchen cabinets that can be built.

KITCHEN SINK SET-UPS USING MODERN STEEL KITCHEN CABINETS

Installation of Modern Steel sectional units is flexible enough to permit use of Modern Steel cabinets with any cabinet type sink top. Some of the most popular kinds of sink tops are illustrated below.

Illustrations at right show choice of three cabinet groupings available for sinks of different lengths. For complete dimensional information, see page 13.

VARIOUS TYPES OF SINKS ARE SHOWN BELOW

Porcelain enamel on cast iron in standard sizes.

Custom built linoleum tops with porcelain or stainless steel bowls.

Custom built or standard sizes of stainless steel.

Custom built porcelain enamel on steel.

Modernize YOUR OLD KITCHEN WITH MODERN (Up-to-Date) STEEL CABINETS

Old kitchens are made into new kitchens easily, quickly and economically by the use of Modern Steel kitchen cabinets. It is not necessary to build a new home in order to have a modern kitchen. Pictures on this page illustrate better than words how simply this transformation is accomplished. In modern kitchens, miles of steps are saved in accomplishing everyday routine tasks. Modern kitchen planners can change your old fashioned kitchen into an up-to-date efficient one with little or no structural alteration and without the necessity of expensive custom-built cabinets. With the many sizes of standard stock cabinet units, modernization is accomplished easily and quickly.

Proper kitchen planning transformed the kitchen shown at the right into the cheerful workroom shown above at only a modest expenditure. Meal preparation becomes a pleasure in the new room.

It is easy to see why kitchen efficiency increases immediately in institutional kitchens after they are modernized with steel cabinets. Cleanliness and sanitation also come automatically.

GENEVA, ILLINOIS

BUILD YOUR *New Home* AROUND A MODERN STEEL KITCHEN

When building a new house, special thought and care should be given to the proper arrangement of the kitchen. Location of doors and windows should be carefully planned. In order to simplify this planning, Modern engineers have developed many practical "Ready-Plan" combinations. By selecting one of these combinations in the proper size to fit the available work area, it is quite a simple matter to locate interior partitions to allow proper wall space for the combination selected. On the lower portion of this page are shown many such package "Ready-Plan" combinations with a table of standard sizes in which they can be secured. Builders should welcome this information as it saves considerable difficulty when installing the finished cabinets. If new building plans are sent to our nearest representative, or the General Office, our Kitchen Planning Department will develop a scientifically planned kitchen for each plan submitted.

Apartments

WITH MODERN KITCHENS RENT BETTER

Shown below are only three typical "Ready-Plan" combinations for apartment installations. Many others are available to fit all types of conditions.

TYPICAL APARTMENT KITCHEN SET-UPS

"READY-PAN" UNIT NO. 1-5' WIDE

General Information:

- 1 No. 2418 Wall Cabinet
- 1 No. 3630 Wall Cabinet
- 1 Overhead Oven Kitchen Range
- 1 No. 18-C Base Cabinet
- 1 18" Sink Cabinet with Cutlery Drawer

Above equipment furnished with sink top of either Linoleum or Porcelain. Refrigerator supplied by local distributor.

"READY-PAN" UNIT NO. 2-5' 6" WIDE

General Information:

- 2 No. 3030 Wall Cabinets
- 2 No. 30-WSF Wall Scribing Fillers
- 1 18" Sink Cabinet with Cutlery Drawer
- 1 Four Burner Range (Gas or Electric)

Above equipment furnished with sink top of either Linoleum or Porcelain. Refrigerator supplied by local distributor.

"READY-PAN" UNIT NO. 3-6' WIDE

General Information:

- 2 No. 2430 Wall Cabinets
- 1 No. 2418 Wall Cabinet
- 1 No. 24-US Utility Shelf
- 1 24" Sink Cabinet with Cutlery Drawer
- 1 Four Burner Range (Gas or Electric)

Above equipment furnished with sink top of either Linoleum or Porcelain. Refrigerator supplied by local distributor.

MODERN STEEL KITCHEN CABINETS CAN BE INSTALLED IN YOUR HOME EASILY, QUICKLY and ECONOMICALLY

Every cabinet unit to be used in your Modern Steel kitchen leaves the factory completely assembled and finished. They are transported to the job in specially designed crates that protect the cabinets in transit.

On the job, no special equipment is required to install the cabinets. The only tools needed are a screw driver, level, hammer and a saw. Setting the cabinets permanently in place in the kitchen is so simple that no skilled mechanics or factory trained workmen are required.

In building each cabinet section at the factory, great care is exercised to be sure that they are absolutely plumb and square. Like care must also be exercised in preparing the floor and walls of the room in your house where the cabinets are to go, to insure perfect alignment. Floor should be perfectly level and all walls plumb.

A sufficient quantity of the proper size wood screws are supplied with each cabinet section to attach it securely to the wall. Bolts for locking each cabinet section to the adjoining one are also supplied as regular equipment.

A complete set of specific installation instructions is furnished with each order so the people who actually install the cabinets will have detailed information before them for each progressive step of the installation work. These instructions contain information on the

proper method of making minor adjustments such as lining up doors and drawers after the installation is completed.

Should any accidental scratches occur in transit, a quantity of "touch-up" enamel is supplied along with instructions for repairing such blemishes.

The importance of taking careful measurements on the job before ordering cabinets is very necessary and precise care in writing up the order is also emphasized. Cabinets are, of course, furnished exactly as ordered and the dimensions of each cabinet section do not vary from the dimensions given on the work sheet on pages 12 and 13. So when measurements on the job are carefully taken and cabinets of the proper size are ordered, there should be no difficulty in making a neat installation.

Odd-size, left-over space at the ends of the installation are easily and neatly filled by the use of scribing fillers that are made for that specific purpose. See pages 12 and 13 for information on filler strips.

It is well to remember that Modern Steel cabinets, once properly installed, will last indefinitely. Just a few minutes of extra care and precaution in installing the cabinets may be the means of enhancing still further the beauty and enjoyment Modern Steel cabinets bring to the home.

MODERN STEEL EQUIPMENT CO.
GENEVA, ILLINOIS

HANDSOME *Chromsteel* FURNITURE

No. 90 Chair

Frame of chair is highly polished tubular Chromsteel. Form-fitting seat and back are of steel finished in choice of baked enamel colors.
